# Bostik <br> smart adhesives <br> SL C510 PRO 

## HEAVY-DUTY SELF-LEVELLING COMPOUND FOR USE ON INTERNAL FLOORS

## KEY BENEFITS

- Very high mechanical resistance with no shrinkage
- Suitable for supermarkets and hypermarkets
- No sanding

## APPLICATIONS

## DESTINATION

SL C510 PRO self-levelling compound is suitable for use in both new-build and renovation projects. Can be used in areas that are subject to high levels of foot traffic. For interior use only

## Areas of applications:

## New work

- Surfaced concrete with a neat face
- Concrete with embedded screed
- Built-in screed
- Heated floors
- Asphalt screed

## Renovation

- Old tiles, terracotta tiles, etc.
- Old traces of glue
- Old semi-flexible tiles
- Old floor paints

## Associated floor coverings :

- PVC coverings, LVT
- Linoleum, rubber
- Carpet, Textile
- Tiling
- Hardwood

PRODUCT CHARACTERISTICS

| Colour | Grey |
| :---: | :---: |
| Composition | Powder based on hydraulic binders, mineral fillers and special additives |
| Mixing ratio | 6 liters of water per 25 kg bag |
| Storage / Shelf life* | 9 months |
| Application temperature | $+5^{\circ} \mathrm{C}$ to $+30^{\circ} \mathrm{C}$ |
| Application thickness | 1-20 mm |
| Coverage | $1.5 \mathrm{~kg} / \mathrm{mm} / \mathrm{m}^{2}$ |
| Working time** | 20 min |
| Walk on time** | 2 hours |
| Curing time / Floor installation** | Tiling : 24h <br> PVC, linoleum, rubber : 48-72h <br> Wood floor : 48-72h <br> Floor paint: 48-72h |
| Compressive strength | C30 |
| Flexural strength | F7 |

*from date of manufacture in original, unopened packaging, clear of the ground, in cool, dry conditions within the temperature range $+5^{\circ} \mathrm{C}$ to $+25^{\circ} \mathrm{C}$ and out of direct sunlight. Protect from frost, damp, condensation and dew.
**these times are determined at $+23^{\circ} \mathrm{C}$ and 50 \% relative humidity on normally absorbent substrates

## DIRECTIONS FOR USE

## PREPARATION

## Subfloor:

Ensure the subfloor is in accordance with building standards. Subfloors must be clean, sound, dry ( $<75 \% \mathrm{RH}$ ), and free from contaminants that may impair adhesion e.g. dust, grease, paint, plaster, polish, water softenable adhesive etc.

Check any remaining adhesive residues to ensure they are not water softenable, are hard, sound, and have sufficient cohesive strength to receive a levelling compound.

Mechanically cut back any hard adhesives residues to a minimum. Remove any weak or water softenable adhesives.

Tiles must firmly adhere to the base, re-fix them if necessary. If the floor tiles are easily removable, remove them completely.

The temperature of the floor must be maintained between $+5^{\circ} \mathrm{C}$ to $+25^{\circ} \mathrm{C}$ throughout the application and drying of the smoothing compound.

Cracks smaller than 0.8 mm as well as joints should be treated with RENO E742 STRUCTURE, which should be sanded with S 409 sand.

If the supports do not have the required humidity level, implement our anti rising damp proof membrane HYTEC E336.

## Underfloor heating systems:

Underfloor heating systems must be switched off for 48 hours before installation. Wait 7 days after installation before gradually turning up underfloor heating.

Refer to the CPT, DTU or technical notice to check the surfaces. Here are some recommendations extracted from these documents :

| $\begin{aligned} & 3 \\ & \mathbf{Z} \\ & \mathbf{Z} \end{aligned}$ | SURFACE | SPECIFIC PREPARATIONS AND VERIFICATIONS |
| :---: | :---: | :---: |
|  | Concrete slab |  |
|  | BAP <br> Fluid cement screed | Elimination of the cure product |
|  | Calcium sulfate screed | Measurement of residual moisture |
|  | Heated and/or cooled floors + ERP | Check that the heating has been carried out |
|  | Tiles | Cleaning with water and soda lye, followed by rinsing with clear water |
|  | Semi-flexible slab without asbestos |  |
|  | Traces of acrylic glue | Remove as much as possible by scraping |
|  | Traces of asbestos-free bituminous glue | Remove excess thicknesses $>0.5 \mathrm{~mm}$ or total removal |
|  | Floor paint | Sanding to restore roughness then cleaning same as tiles |
|  | Floor resin | Sanding then same as floor paint |
|  | Parquet on joists | Elimination of waxes and varnishes followed by dusting by aspiration |
|  | Wood-based panels | Check that there is no arrow |
|  | Asphalt screed | No cracks |

| TYPE OF SURFACE |  | PRIMERS | CONSUMPTION |
| :---: | :---: | :---: | :---: |
| Concrete cement screed | Porous | Grip A310 PROJECT GRIP A320 BASIC PRIMROXOL PRIMACRYL | $\begin{gathered} \text { 100-120 } \\ \mathrm{g} / \mathrm{m}^{2} / \text { layer } \end{gathered}$ |
|  | Normally absorbent | GRIP A700 UNIVERSAL PRIMAPRENE UNIDURN <br> GRIP A500 MULTI GRIP A310 PROJECT GRIP A320 BASIC PRIMROXOL PRIMACRYL | $100-120 \mathrm{~g} / \mathrm{m}^{2}$ |
|  | Closed | GRIP A700 UNIVERSAL PRIMAPRENE UNIDURN GRIP A500 MUTL | $80-100 \mathrm{~g} / \mathrm{m}^{2}$ |
| Calcium sulfate screed |  | GRIP A700 UNIVERSAL PRIMAPRENE UNIDURN GRIP A500 MULTI GRIP A310 PROJECT | $\begin{gathered} \text { 100-120 } \\ \mathrm{g} / \mathrm{m}^{2} / \text { layer } \end{gathered}$ |
| Tile |  | GRIP A700 UNIVERSAL PRIMAPRENE UNIDUR N GRIP A500 MULTI | $100-120 \mathrm{~g} / \mathrm{m}^{2}$ |
| Traces | f gluing |  |  |
| Residue fror | m patching |  |  |
| Semi-fle | xible tiles |  |  |
| Paint |  | GRIP A936 XPRESS | $80-100 \mathrm{~g} / \mathrm{m}^{2}$ |
| Resin |  | GRIP A936 XPRESS | $80-100 \mathrm{~g} / \mathrm{m}^{2}$ |
| Parquet on joist |  | GRIP X910 FILL \& WOOD | $0,8-1 \mathrm{~kg} / \mathrm{m} 2$ |
| CTBX-CTBH-0583 panels |  | GRIP X910 FILL \& WOOD | 0,6-0,8 kg/m2 |
| Asphalt screed |  | GRIP A936 XPRESS | $100-120 \mathrm{~g} / \mathrm{m} 2$ |

## MIXING

Measure 6 liters of clean, cold water into a clean mixing bucket. Gradually add the bag of Bostik SL C510 PRO to the water, whilst continually mixing with an electric drill and mixing paddle until a smooth lump-free mixture is obtained. This will normally be achieved after 2 minutes. Do not under mix.

After mixing, a maturing time of at least 1 minute is recommended to optimise the flow. Remix for 30 seconds.

The mixture will retain its self-smoothing capability for approximately 20 minutes under normal conditions.

Note: the addition of too much water may result in separation of the compound.

## APPLICATION

## Application thickness :

A depth of 1 mm to 20 mm is permissible in a single application. For depths above 20 mm , the product needs to be used as a blended compound and treated as a mortar.

If a second application of Bostik SL C510 PRO is required, this can be carried out once it is ready to take foot traffic.

## Trowel application :

Pour the mixed material onto the prepared substrate to a thickness between 1 mm and 20 mm .

Using a smooth edge stainless steel trowel, smooth over the wet product to gain the desired thickness and smoothness. A pin level may be used to assist in gaining the required depth. Use a spiked roller to remove any trapped air and flow lines, to give a uniform surface appearance.

## Pump application :

Where large floor areas require levelling, it is beneficial to apply Bostik SL C510 PRO by mortar screw pump. Application rates in excess of $200 \mathrm{~m}^{2}$ per hour at 5 mm or $300 \mathrm{~m}^{2}$ per hour at 3 mm are achievable by pump application. Care should be taken when pumping to undertake periodic flow tests of the compound, from the end of the hose. Flow test results should be 130-140mm when using an EN 12706 flow tube.

## DRYING TIME

Protected from strong sunlight and through draughts as this can dehydrate the product resulting in incorrect curing.

## Foot Traffic:

The compound will accept foot traffic after 2 hours at $+25^{\circ} \mathrm{C}$ (approx.). In lower temperatures, this will be extended.

## Floor installation :

The curing time depends on how absorbent the subfloor is, the ambient \& the floor temperature and the humidity :

| Ceramic tile / textile floor | 24 hours at $+25^{\circ} \mathrm{C}$ |
| :---: | :---: |
| coverings: |  |
| Resilient floor coverings <br> (PVC, linoleum, rubber): | $48-72$ hours at $+25^{\circ} \mathrm{C}$ |
| Wooden floor coverings: | $48-72$ hours at $+25^{\circ} \mathrm{C}$ |
| Floor paint: | $48-72$ hours at $+25^{\circ} \mathrm{C}$ |

## CLEANING

Clean tools and equipment with warm soapy water immediately after use.

| Code | UC | PCB | PALLET | GENCOD |
| :---: | :---: | :---: | :---: | :---: |
| 30615449 | 25 kg | 1 | 48 | 3549212484644 |

## SAFETY

For more details, consult the safety data sheet on https://bostiksds.thewercs.com/default.aspx

The information given and recommendations made herein are based on Bostik's research only and are not guaranteed to be accurate. The performance of the product, its shelf life, and application characteristics will depend on many variables, including the kind of materials to which the product will be applied, the environment in which the product is stored or applied, and the equipment used for application. Any change in any of these variables can affect the product's performance. It is the buyer's obligation, prior to using the product, to test the suitability of the product for an intended use under the conditions
that will exist at the time of the intended use. Bostik does not warrant the product's that will exist at the time of the intended use. Bostik does not warrant the product's suitability for any particular application. The product is sold pursuant to Bostik's Terms and Conditions of Sale that accompanies the product at the time of sale. Nothing contained constitute permission inducement or recommendation to practice any invention covered constitute permission, inducement, or recommendation to prat
by any patent, without authority from the owner of the pat
