

# MULTI GROUT

## TECHNICAL DATASHEET

Version: 2020-06-22

### PRODUCT DESCRIPTION

Bostik Multi Grout is a cement-based floor and wall grout.

### AREA OF USAGE

For grouting tiles, mosaic and natural stone indoors and outdoors with grout width of 2-7 mm.

### WORKING INSTRUCTION

Preparation: Before grouting, remove hard materials forced up over half the grout depth and other contaminants.

Mixing: Add approx. 4.0 litres of clean water to 15 kg of grout (always water first). Mix for 2 min. using a strong, slow revolving electric drill fitted with a whisk. Leave to stand for a few minutes before mixing again. The grouts must be clear of hard materials before grouting. Application: Spread evenly using a grout spatula diagonally over the tiles. A 45 degree angle on the spatula is recommended. Scrape off the tiles without going into the grout joints. Washing: Before washing, check the consistency of the grout with a finger. Drying time before washing can vary due to temperature, ventilation etc., normally approx. 20 min. at +20 C. Wash diagonally with clean water and grout sponge with handle. Change water as required. If required, wash the tiles again after a few hours or the following day. Wash the tiles again a few days after grouting to achieve maximum strength.

Consumption: Approx. 0.3-1.5 kg/m<sup>2</sup> depending on grout width and ceramic tile format.

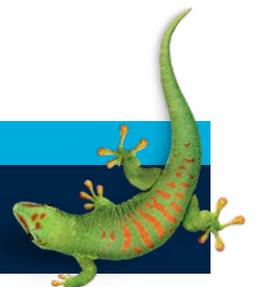

### SAFETY

The product contains white cement. Can irritate skin. For more information, refer to the Safety Data Sheet.

## TECHNICAL DATA

Properties before application	
Binder	Special cement
Filler	Myanite, max. 0.25 mm
Grout width	2-7 mm
Density	1.5 kg/litre
Colour	White, grey/white, light grey, medium grey, grey
Use within	Approx. 2 hours at + 20 C
Product properties	CG2 (EN 13888)
Material consumption	0.3 – 1.5 kg/m2 depending on tile format
Working temperature	Can be applied from +10 to +25°C
Cleaning	Immediately with water
Pack size	5, 15 kg
Storage	18 months in a dry, cool and unopened package.
