No liner, just performance

A NEW GENERATION OF LINERLESS SMART ADHESIVES ENSURES SMOOTH RELEASE AND HIGH ADHESION

Smart help: TL@bostik.com
Bostik understands the role that adhesives can play in determining the final appearance and performance of a label. Over many years, we have taken the time to understand the needs of all customers including roll stock manufacturers, converters, printers and end users. As a result, we have developed a range of innovative technologies which can meet the most demanding requirements.

**ROLL STOCK MANUFACTURERS**

With TLH 4300 E, one adhesive can be used with a variety of materials. The excellent adhesion properties of TLH 4300 E facilitate coating weights to be reduced to as low as 15gsm in some conditions, and enable customers to benefit from reduced cost in use and sustainability advantages.

**CONVERTERS & PRINTERS**

TLH 4300 E offers excellent die-cut properties, which is critical for converters when separating into single labels at the point of label application.

**END USERS**

TLH 4300 E ensures excellent adhesion, even on PE and PP films. The high tack and shear formulation provides extreme temperature resistance and minimises the need for re-labelling.

**Benefits when you work with Bostik**

In the development of TLH 4300 E, Bostik has consulted and worked closely with leading customers across the label value chain. As a result, the needs of all customers involved in the production, converting, printing and application of labels are addressed.
