33 LV ADHESIVE

HIGH SOLIDS WATER BASED LAMINATING ADHESIVE

YOUR SMART ADVANTAGES
- High resistance to sunlight and ultra violet radiation
- Non staining
- Odour free
- Non hazardous
- Rapid bond strength
- Brush, roll or spray application

USES
- Laminating rigid or plasticised PVC to chipboard
- Laminating fabric to foam
- Flocking Adhesive
- Laminating fabric to various plastics
- Art work adhesive
- Adhering solvent sensitive polystyrene foam to porous surfaces
- Laminating foam to foam (Polyurethane).
- Label adhesive

PRODUCT CHARACTERISTICS

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Colour</td>
<td>Milky white</td>
</tr>
<tr>
<td>Viscosity</td>
<td>Brushable</td>
</tr>
<tr>
<td>Composition</td>
<td>Aqueous dispersion of complex synthetic polymers</td>
</tr>
<tr>
<td>Solids content</td>
<td>Approx. 60%</td>
</tr>
<tr>
<td>Usage</td>
<td>Interior and exterior</td>
</tr>
<tr>
<td>Application temperature</td>
<td>5 to 40°C</td>
</tr>
<tr>
<td>Full cure</td>
<td>Final bond strength can take up to 7 days</td>
</tr>
<tr>
<td>Thinner</td>
<td>Do not thin</td>
</tr>
<tr>
<td>Coverage</td>
<td>4 - 8m²/L per surface, depending on surface and application method. Absorbtent surfaces may need two coats.</td>
</tr>
</tbody>
</table>

Water resistance        Excellent, but not for continuous immersion
Service temperature*    -20 to +50°C
* The adhesive will deteriorate if subjected to high temperatures and/or humidity on a continuous basis.

DIRECTIONS FOR USE
Read and understand the Safety Data Sheet before using this product.

SURFACE PREPARATION
Ensure all surfaces are clean and dry. Severe in service conditions or difficult materials may require a primer, consult Bostik for assistance.

APPLICATION
- Materials may vary – prepare a test piece first to ensure product and process is suitable.
- Coarse fabrics may require multiple coats of adhesive for maximum peel strength.
- Stir thoroughly with a flat-bladed paddle to disperse any settled solids before use.
- It is recommended that you decant a smaller quantity of stirred adhesive into a clean metal or glass container and work from this container. This will help avoid drying of the product in the can and extend life of opened product.

Porous to non-porous adhesion
- Using a brush, apply an even film of adhesive to one side to be bonded.
- Bring the two surfaces together and roll flat.
- Allow about 20 minutes for some bond strength to develop before handling.

Non-porous to non-porous adhesion
- Using a brush, apply an even film of adhesive to both sides to be bonded.
- Allow the adhesive to dry.
- Heat the glue line to between 60 and 70°C and laminate the materials using a much pressure as possible.
- Alternatively the glue line can be activated by using a hot iron or reactivated by spreading a thin film of Bostik No. 2 Solvent over one bond line and then laminating.

General Information
- Coverage should be 100% of the surface for best adhesion. The most common cause of poor bonding is insufficient adhesive.
- On porous surfaces several coats may be required to achieve an even film on the surface. Allow previous coats to dry sufficiently (max 24 hours) before re-
coating. Applying wet on wet adhesive will cause excessive soak-in.
- The porosity of a surface may be judged by applying a droplet of water. If the water beads the substrate is not porous, if the bead soaks in the substrate is porous.
- Carefully align the two surfaces and join together. Take care not to trap any air and use as much pressure as possible. The recommended minimum pressure required to give a good bond is 280kPa (40psi).
- The adhesive may be coloured using dyes. Contact Bostik for more information.

LIMITATIONS
- Not suitable for polyethylene, polypropylene or Teflon.
- Works best with at least one absorbent substrate. Bonds will take much longer to dry with two non-absorbent substrates.

CLEANING
Water while wet, Bostik Solvent No. 4 when dry. Use Bostik Handy Wipe towels to remove adhesive from skin.

STORAGE AND SHELF LIFE
Store in cool, dry conditions out of direct sunlight below 25°C. Protect from freezing and frost. Shelf life is 12 months if stored in cool, dry conditions in original, unopened containers.

DISPOSAL
Empty containers, once dry, may be disposed of via local landfill. If spilt absorb product with clay, sand or earth. Collect in properly labelled containers. Dispose of according to local authority regulations. Do not dispose of down drains or into waterways.

PRECAUTIONS IN USE
Complete details on each of the products mentioned are available on the product Safety Data Sheets. To ensure no harm is caused to persons using Bostik products, it is recommended that all concerned read the appropriate Safety Data Sheets. Visit www.bostik.co.nz for copies.

FIRST AID
Swallowed: Do not induce vomiting, give a glass of water and contact a doctor immediately.
Skin: Remove contaminated clothing, wash with warm soapy water. Do not scrub.
Eyes: Hold open and flood gently with water for at least 15 minutes. Get medical advice.
For emergency information contact the National Poisons Information Centre, phone 0800 764 766 (0800 POISON) or CHEMCALL, phone 0800 243 622.

This datasheet is for the general help of users. It is provided in good faith. The data is current and accurate to the best of our knowledge. Differing materials, substrates, environments, site conditions, and product storage, handling and application may affect results. Users should carry out tests to decide the product's suitability for purpose. This data sheet and the properties of the product may change without notice. Users, suppliers and retailers should check that the data sheets they have are the latest.
