INDUSTRIAL SILICONE

PREMIUM 100% SILICONE SEALANT

YOUR SMART ADVANTAGES
- High performance
- Neutral cure
- Good adhesion
- Stays permanently flexible
- Excellent UV resistance
- Excellent weather resistance
- Interior/exterior

USES
- Weather seals between glass and aluminium
- Backglazing between timber and glass
- Perimeter seals between aluminium window frames and brick and masonry
- Air seals in concrete panels
- General construction
- Marine work
- Industrial maintenance applications

PRODUCT CHARACTERISTICS

Product code
- Clear: 30804311
- Grey: 30804541
- White: 30804310

TYPICAL PERFORMANCE DATA (approx.)
| Shore “A” hardness | 27 |
| Tensile            | 260psi |
| Joint movement     | ±25% |

Application temperature 10°C to 40°C
Service temperature* -50 to 170°C
* The maximum service temperature listed is for transient temperatures. The silicone sealant will deteriorate if subjected to high temperatures on a continuous basis.

DIRECTIONS FOR USE
Silicones are not always compatible with plasticized sealants, bitumen and some backing rods. The incompatibility may cause discolouration, poor sealant cure or long term degradation of the sealant. Always carry out compatibility tests where contact with potentially incompatible materials may occur.

SURFACE PREPARATION
Always ensure that the surfaces to be sealed are dry and free from oil, dirt and grease. Use the two wipe cleaning process for impervious substrates. Ensure the cloths are clean and changed frequently. Use a suitable cleaner such as Isopropyl Alcohol. Masking areas to be sealed gives a neater finish. A primer may be required for some substrates, consult your supplier for more information.

APPLICATION
- Use masking tape when sealing joints to simplify clean up, to protect surfaces and ensure a neat job.
- Cut cartridge seal.
- Cut the nozzle at a 45° angle to the desired bead thickness. Screw nozzle onto cartridge and place cartridge into caulking gun bottom end first.
- For general sealing apply sealant in a continuous steady flow. Push the sealant ahead of the nozzle to completely fill the joint.
- Smooth off and remove masking tape before a skin forms (within 10 minutes).
- Remove excess sealant immediately using a cloth dampened with mineral turpentine.

LIMITATIONS
Bostik Industrial Silicone is NOT suitable for the following applications:
- Totally confined spaces as the sealant requires atmospheric humidity to cure. It will not cure where
LIMITATIONS (continued)

− it does not have access to atmospheric humidity
− Aquariums
− Adhering mirrors
− Structural glazing
− Under water applications including swimming and spa pools
− Below grade applications
− All stone – staining may occur. Contact Bostik for recommendations
− Trafficable areas
− Polycarbonate sheeting
− Where painting is required. If painting is required, the use of paintable Simson Sealants is recommended
− Do not clean or treat the silicone with materials, cleaning agents or solvent that may affect or discoulour the silicone. This includes, but is not limited to, bleach containing cleaners, solvents and paint fumes. The silicone is especially vulnerable while curing
− Oxime silicone sealant will tend to show a slight colour shift on ageing. This will not detract from the product performance

CLEANING

Remove excess silicone using a polyethylene scraper and clean cloth dampened with mineral turpentine. Do not use Isopropyl Alcohol to clean around uncured sealant. Cured silicone can only be mechanically removed by cutting with a sharp blade (avoid undercutting the sealant).

STORAGE AND SHELF LIFE

Store in a cool dry place below 25°C and out of direct sunlight. The product is best used 18 months from the date of manufacture when stored as directed.

DISPOSAL

Empty containers may be disposed via local landfill. If spilt, absorb with clay, sand or earth. Collect and seal in properly labelled metal container. Dispose of according to local authority regulations. Do not dispose of down drains or into local waterways.

PRECAUTIONS IN USE

Complete details on each of the products mentioned are available on the product Safety Data Sheets. To ensure no harm is caused to persons using Bostik products, it is recommended that all concerned read the appropriate Safety Data Sheets. Visit www.bostik.co.nz for copies.

Bostik Industrial Silicone is not classed as Dangerous Goods. The product however, should be used in accordance with good occupational, health and safety practices.

May cause irritation if swallowed, moderately irritating to eyes, vapour may cause irritation during the cure stage (if vapour in high concentrations).

Use in a well ventilated area as it releases methyl ethyl ketoxime and methanol until fully cured. Do not swallow and avoid prolonged or repeated contact with the skin. If contact with the eyes occurs, wash eyes with copious quantities of water and consult a doctor if irritation persists.

For emergency information contact the National Poisons Information Centre, phone 0800 764 766 (0800 POISON) or CHEMCALL, phone 0800 243 622.
