**DESCRIPTION**
SL-Gyp™ is a premium, hybrid gypsum / cement-based, self-leveling underlayment that can be installed from 1/4” up to 2” thickness without extension. It is designed for use over distressed gypsum subfloors, light weight concrete, mud beds, structurally sound wood, adhesive residue and it is ideal for use on radiant or in-floor heating systems.

SL-Gyp™ can also be used for certain low-prep applications where shot-blasting and mechanically cleaning substrates cannot be done. SL-Gyp™ provides a strong durable substrate for floor coverings such as rubber, sheet vinyl and vinyl composition tile (VCT), luxury vinyl tile (LVT), or hardwood flooring.

**PRODUCT FEATURES**
- Ideal for pumping
- Maintains healing and pour merging properties for up to 20 minutes
- Exceptional compressive strength – 5,000 psi
- Suitable for use with in-floor hydronic and electric radiant heating systems
- Ideal for repairing distressed gypsum and sound plywood substrates
- Can be used over mud beds and lightweight concrete
- Ideal for low-prep applications
- Rapid strength gain
- Contributes points to LEED® certified projects

**DIRECTIONS FOR USE**
Read and understand technical and safety data sheets completely before beginning installation. Refer to www.bostik-us.com for the most recent product information and safety data sheet prior to installation.

Note: Depth of lift, cooler temperatures, higher humidity and inadequate ventilation can extend drying times.

T2335 - 01.18.16
SURFACE PREPARATION

GENERAL NOTE: SL-Gyp™ is not a vapor barrier and can only be used over dry substrates in areas that are not subject to moisture. Test substrate as per ASTM F-1869 for (MVER) and/or ASTM F-2170 for (RH%). If levels exceed 3 lbs (MVER), 75% moisture. Test substrate as per ASTM F-1869 for (MVER) and/or ASTM F-1869 for (RH%). If levels exceed 3 lbs (MVER), 75% moisture. If levels exceed 3 lbs (MVER), 75% moisture. If levels exceed 3 lbs (MVER), 75% moisture.

SUBSTRATE PREPARATION AND PRIMING BY SUBSTRATE:

CONCRETE: (TEXTURED, OPEN & POROUS)
Preparation: Weak surfaces must be cleaned down to solid, sound concrete by mechanical means such as shot-blasting, grinding or scarifying.
Priming: Apply one coat of Universal Primer™ Pro diluted 50/50 (1 part water: 1 part Universal Primer™ Pro) using a split tip broom. Pour out or spray liberally and work into surface, leave no puddles or bare spots. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 1 hour) and up to 24 hours. If primer has dried longer than 24 hours a second coat of Universal Primer™ Pro will be required.
Thickness: 1/4” up to 2”.

GYPSUM UNDERLAYMENT, LIGHTWEIGHT CONCRETE AND MORTAR BEDS:
Preparation: Weak surfaces must be cleaned down to solid sound substrate by mechanical means such as shot-blasting, grinding or scarifying.
Priming (requires two coats): The first coat should be diluted and applied at 1 part Universal Primer™ Pro: 3 parts water using a split tip broom. Pour out or spray liberally and work into surface, leave no puddles or bare spots. After initial coat is dry (30-60 minutes) apply the second coat of Universal Primer™ Pro using 1 part water: 1 part Universal Primer™ Pro and place using a split tip broom. Pour out or spray liberally and work into surface, leave no puddles or bare spots. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 2 hours and up to 24 hours). If Primer has dried longer than 24 hours a second coat of Universal Primer™ Pro will be required.
Thickness: 1/4” up to 2”.

WOOD:
Preparation: Prepare by sanding down to clean bare wood. Secure wood subfloor with deck screws and fill open seams with UltraFinish™ Pro, Webcrete® 98 or Webcrete® 95. Subfloors must be minimum 3/4”, untreated, APA Rated, tongue & groove, Type 1, exterior grade plywood.
Priming: Apply one thin coat of Universal Primer™ Pro (undiluted) using a 3/8” nap roller. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 1 hour) and up to 24 hours. If Universal Primer™ Pro has dried longer than 24 hours a second coat of Universal Primer™ Pro may be required.
Thickness: 1/4” up to 2”.

ADHESIVE RESIDUE: (THIN, TRANSLUCENT NON-WATER SOLUBLE, FREE OF TACK AND WELL BONDED)
Preparation: SL-Gyp™ can be installed over thin (translucent) sound, non-water soluble adhesive residues that are free of tack and well bonded to the substrate. The adhesive cutback needs to be prepared using the wet scrape method as outlined in the Resilient Floor Covering Institute booklet “Recommended Work Practices for the Removal of Resilient Floor Coverings”. Remove all patching materials below the adhesive and avoid applications where heat or excessive moisture will soften or degrade the adhesive.
Priming: Apply one thin coat of Universal Primer™ Pro (undiluted) using a 3/8” nap roller. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 1 hour) and up to 24 hours. If Universal Primer™ Pro has dried longer than 24 hours a second coat of Universal Primer™ Pro will be required.
Thickness: 1/4” up to 2”.

REQUIRED APPLICATION TOOLS
• Measuring pail
• Mixing barrel or pump
• Mixing paddle
• Mixing paddle
• Gauge rake
• Smoothing tool
• Measuring pail

EPOXY MOISTURE VAPOR COATING (BOSTIK’S SLAB-COTE™, D-250™, OR D-261™):
Preparation: Sweep, vacuum, and wet mop to remove dust. DO NOT sand or abrade epoxy coating as this can compromise the performance of the coating.
Priming: Apply one thin coat of Universal Primer™ Pro (undiluted) using a 3/8” nap roller. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 2 hours) and up to 24 hours. If Universal Primer™ Pro has dried longer than 24 hours a second coat of Universal Primer™ Pro may be required.
Thickness: 1/4” up to 2”.

RECOMMENDED WORK PRACTICES

- Measuring pail
- Mixing barrel or pump
- Mixing paddle
- Gauge rake
- Smoothing tool
- Measuring pail

ADHESIVE RESIDUE: (THIN, TRANSLUCENT NON-WATER SOLUBLE, FREE OF TACK AND WELL BONDED)
Preparation: SL-Gyp™ can be installed over thin (translucent) sound, non-water soluble adhesive residues that are free of tack and well bonded to the substrate. The adhesive cutback needs to be prepared using the wet scrape method as outlined in the Resilient Floor Covering Institute booklet “Recommended Work Practices for the Removal of Resilient Floor Coverings”. Remove all patching materials below the adhesive and avoid applications where heat or excessive moisture will soften or degrade the adhesive.
Priming: Apply one thin coat of Universal Primer™ Pro (undiluted) using a 3/8” nap roller. Apply SL-Gyp™ once Universal Primer™ Pro is dry (minimum 1 hour) and up to 24 hours. If Universal Primer™ Pro has dried longer than 24 hours a second coat of Universal Primer™ Pro will be required.
Thickness: 1/4” up to 2”.
2. Expansion or isolation joints and working cracks must be reflected through SL-Gyp™.
3. No wet curing methods or sealers should be used.
4. If SL-Gyp™ begins to set before it is applied, DO NOT re-temper by mixing or adding additional liquid.
5. On new concrete always test for sealers and/or curing compounds which inhibit the bond. If sealers and/or curing compounds are present they must be removed by mechanical means prior to applying SL-Gyp™.
6. Always refer to the TDS of any other Bostik product referenced for its full instructions and limitations.
7. Do not use over materials containing asbestos.
8. SL-Gyp™ is approved for dry interiors only.

CLEAN UP
Clean tools with water immediately after use or by mechanical means once dry.

(Coverages may vary depending on substrate conditions.)

MIXING
Add 5.0 quarts per 50 lb. bag of clean potable water to a Bostik mixing drum. Then, add bags of SL-Gyp™ while mixing at full speed with a mixing paddle attached to a heavy duty 1/2” drill (min. 850 rpm). Mix for 2-3 minutes or until lump free. Add no additional water and keep the mixing paddle immersed in the material to avoid entraining excess air.

INSTALLATION
Barrel Mixing: Pour the blended SL-Gyp™ on the floor immediately and disperse with a gauge rake followed by finishing with a smoothing tool. SL-Gyp™ will maintain its workability and healing for up to 20 minutes.

PUMPING
Deep placements and large projects are more efficiently installed with the use of a pump. Contact Bostik Technical Service for instructions, recommended pumping procedures and approved equipment.

NOTE: During application and for first 24 hours prevent excessive air movement but maintain adequate ventilation and protect material from direct sunlight. These variables can cause uneven curing patterns, a false set or cracking.

DRYING
NOTE: Test as per ASTM D4263. Testing must be conducted under climatized conditions.

Finished floor covering materials can be installed after SL-Gyp™ has dried completely. Drying time will be a function of jobsite temperature, humidity, conditions, and installation thickness. Maintaining temperature and adequate ventilation will greatly aid in drying. After 48 hrs. place tests to check SL-Gyp™ for dryness. Tightly, duct tape all four sides of 18”x18” pieces of (3-4 mil) plastic in different locations. Do at least one for each 1,000 sq. ft. of area being tested. Let the tests sit undisturbed for 16 hrs. minimum, then lift the plastic and inspect for surface darkening. Darkening indicates moisture is still present and further drying time is required.

LIMITATIONS
1. It is the responsibility of the contractor to review the complete technical datasheets of Bostik products referenced above as more detailed information may be required. The information provided above acts only as a general guideline and may vary based on jobsite conditions.
DANGER
POISON. HARMFUL IF SWALLOWED. CORROSIVE. CAUSES BURNS. MAY PRODUCE ALLERGIC REACTION BY SKIN CONTACT. CANCER AGENT! EXPOSURE MAY PRODUCE CANCER. CONTENTS HARMFUL. CAUSES BURNS. Do not swallow. Do not get in eyes. Do not get on skin or clothing. Keep out of reach of children. Handle with care. Wear a mask, rubber gloves, safety glasses.

FIRST AID TREATMENT
Contains quartz, Portland cement and vinyl acetate. If swallowed, call a Poison Control Centre or doctor immediately. Do not induce vomiting. If in eyes, rinse well with water for 20 minutes. If on skin, rinse well with water. If on clothes, remove clothes.

SEE SAFETY DATA SHEET

STORAGE AND SHELF LIFE
Store in cool dry area (70° F / 21° C) off the ground on a pallet. Tightly seal package and do not expose to sun. Shelf life is 12 months from date of manufacturing in unopened bags.

VOC
0 g/L (as calculated per SCAQMD 1168)

FLASH POINT
